THE MARKET FOR GREENER PEST MANAGEMENT MATERIALS GROWS

With communities across the country adopting organic landscape management practices and policies for lawns, playing fields, and parks, identifying products that are compatible with the sustainable approach is a central concern for managers and residents. Organic systems nurture soil biology to support the natural cycling of nutrients, resulting in resilient turf systems and plants. Because the use of toxic materials undermines the organic system by harming the soil microbial life, identifying compatible products is an essential component of the system. To assist communities in identifying products and complying with local laws, where they exist, that restrict products to organic compatible materials, Beyond Pesticides has developed the *List of Products Compatible with Organic Landscape Management*.

The List is based on two established lists of materials and products: (i) the National List of Allowed and Prohibited Substances of the Organic Foods Production Act (OFPA), passed by the U.S. Congress in 1990 and overseen by a stakeholder board created by the statute, the National Organic Standards Board (7 C.F.R. 205.601 and 602), and (ii) the U.S. Environmental Protection Agency's list of exempt pesticides, Section 25(b) of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) (40 C.F.R. 152.25).

BACKGROUND ON UNDERLYING LIST

In creating the National List, the authors of OFPA recognized the (i) inherent safety of most natural materials that results from a long history of exposure and adaptation, and (ii) need to assess synthetic chemicals that may cause harm to health and ecology. Thus, the National List allows natural materials to be used in organic crop production unless found to be harmful, but prohibits synthetic materials unless recommended by the NOSB and codified. Three criteria are applied in de-

termining whether a material should be allowed on the National List: no adverse effects to humans or the environment, need for the material (essentiality) in an organic system, and compatibility with organic practices. OFPA outlines a number of impacts that must be considered in this evaluation.

Because continuous improvement is a principle in the organic law, the National List is under a five-year sunset and review cycle to evaluate new information about environmental and health impacts, which may require a change in a listing. A petition process allows the NOSB to evaluate proposed additions or adjustments to the National List.

Tying the *List of Products Compatible with Organic Landscape Management* to the National List allows communities to take advantage of the evaluation, and regular re-evaluation, performed by the NOSB's public process. The list of organic landscape management products also incorporates EPA's list of active ingredients that do not need to be registered as pesticides. This is a short list of materials, most of which are nonsynthetic and are allowed in organic production.

Beyond Pesticides encourages residents to advocate in their community for pesticide policies with the above criteria. The list can be used as a guide for inputs in all organic lawn care practices community-wide. Organic turf management is not a product-based approach, and since all products have some degree of risk, Beyond Pesticides urges that all products are used as a last resort. List of Products Compatible with Organic Landscape Management

Note that there may be other formulations of a product under a similar brand name (e.g., many brands sell both ready to use and concentrate versions of their products). The allowed list describes: (i) active ingredient in product; (ii) product name; (iii) pesticide category [i.e., insecticide, herbicide, fungicide, etc.], and (iv) regulatory status [organic or exempt from EPA registration, 25b].
